7.1 Air Quality Monitoring

The Board continued its efforts under the Ambient Air Quality Monitoring (AAQM) Programme by conducting regular monitoring of ambient air quality at key urban centres and major GIDCs including Ahmedabad, Vadodara, Surat, Rajkot, Ankleshwar, Vapi etc. Sampling is carried out in accordance with prescribed standards, and the monitored parameters included PM_{10}, $PM_{2.5}$, SO_2, NO$_x$, NH_3, O_3, CO, Lead, Arsenic, Nickel, Benzene, and Benzo(a)pyrene.

Ambient air quality monitoring is undertaken as part of various initiatives such as the National Air Quality Monitoring Programme (NAMP) and the State Air Quality Monitoring Programme (SAMP) to strengthen air quality monitoring efforts across the State.

7.1.1 National Air Quality Monitoring Programme (NAMP)

NAMP is a nation-wide programme of ambient air quality monitoring. The objectives of the NAMP are to determine status and trends of ambient air quality; to ascertain whether the prescribed ambient air quality standards are violated; to Identify Non-attainment Cities; to obtain the knowledge and understanding for developing preventive and corrective measures, to understand the nature's self-cleansing process including dilution, dispersion, wind-based movement, dry deposition, precipitation and chemical transformation of pollutants.

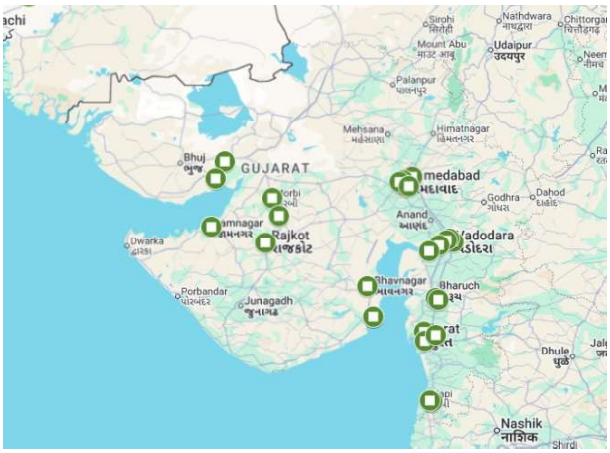

Ambient Air Quality Monitoring is conducted at 83 stations across the State under this programme, with the help of the CPCB, Delhi. The monitoring of pollutants is carried out for 24 hours with a frequency of twice a week, to have one hundred and four (104) observations in a year. Annual average of year 2024-25 is mentioned in **Annexure – 16** for all locations.

7.1.2 State Air Quality Monitoring programme (SAMP)

SAMP is a state level programme of ambient air quality monitoring. Ambient Air Quality Monitoring is conducted at 26 stations across the State under this programme.

Annual average of year 2024-25 is mentioned in **Annexure – 17** for all locations.

7.1.3 Volatile organic compound (VOC) Monitoring

GPCB initiated a dedicated Volatile Organic Compounds (VOC) monitoring program across major industrial clusters in the State covering 27 VOC monitoring locations. This initiative aims to assess the presence and concentration of VOCs in ambient air, which are known to have significant environmental and health impacts.

VOC monitoring is conducted twice a month at each of the 27 locations, with continuous sampling carried out over a 24-hour period as per the guidelines prescribed by the CPCB. The data generated helps in identifying pollution trends, and formulating effective mitigation strategies.

CHAPTER : VII

Environmental Quality Monitoring Programmes

This program reflects GPCB's commitment to strengthening air quality management in industrial areas and ensuring compliance with national environmental standards. Annual average of year 2024-25 is mentioned in **Annexure – 18** for all locations.

7.1.4 Continuous Ambient Air Quality Monitoring (CAAQMS)

To strengthen air quality monitoring across the state, GPCB has installed five Continuous Ambient Air Quality Monitoring Stations (CAAQMS) at strategic locations—Maninagar, Vatva, Vapi, Ankleshwar, and Gandhinagar. These stations continuously monitor key ambient air pollutants and transmit real-time data to the "Sameer" App, which is managed by the CPCB. The data is also used to calculate Air Quality Index (AQI), thereby ensuring greater transparency and public awareness.

To further expand and enhance the monitoring network, GPCB is in the process of setting up five additional CAAQMS at Vadodara, Surat, Rajkot, Mehsana, and Bhavnagar (one in each city). These upcoming stations will be established based on a data purchase model, enabling timely and cost-effective air quality data. Installation is expected to be completed in the next few months, thereby strengthening the real-time air quality monitoring infrastructure across Gujarat.

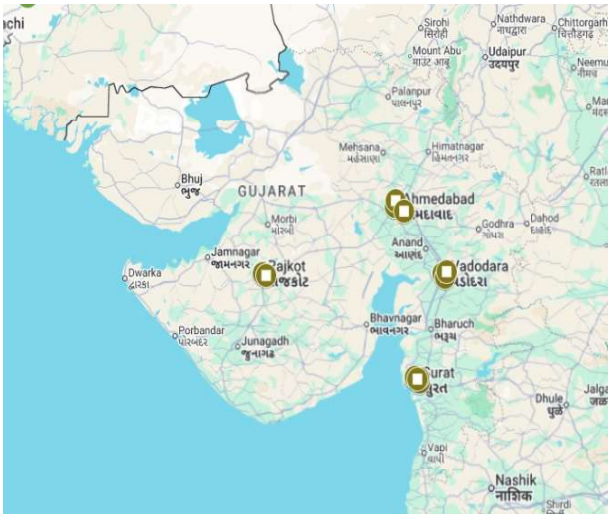

Annual average of CAAQMS data for year 2024-25 is given below.

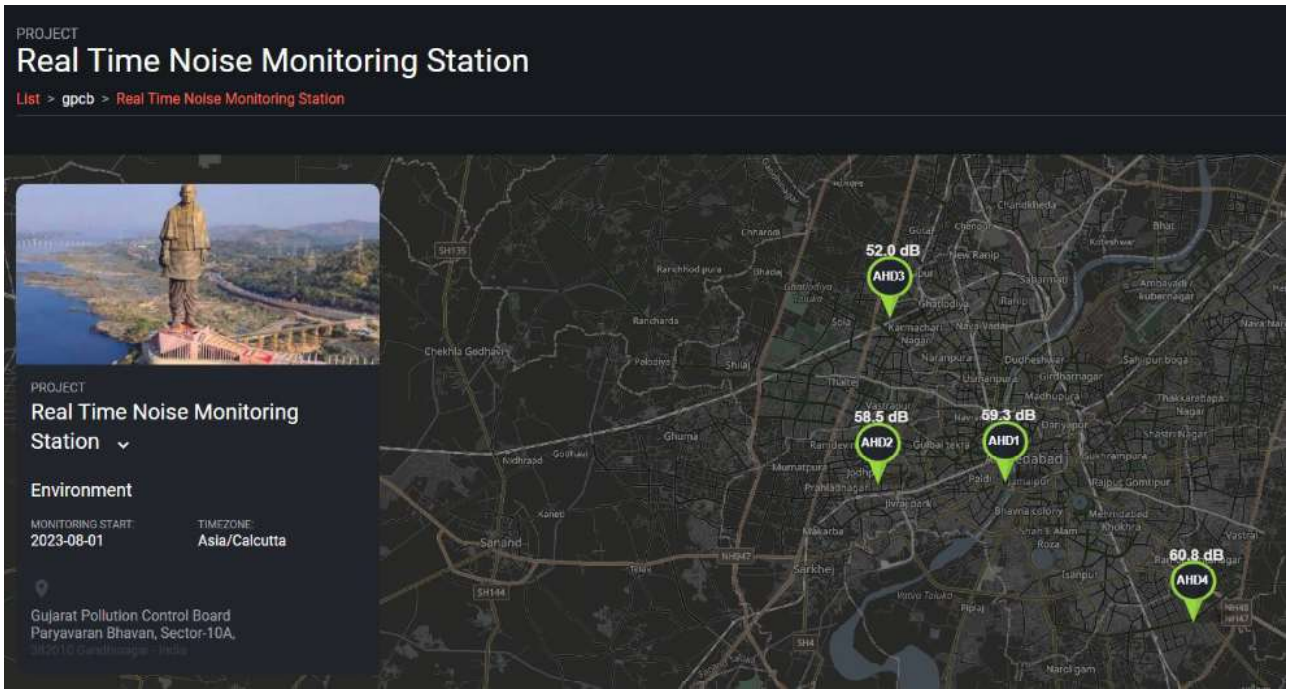

Sr. No.	Name of RO	Location	PM10	PM2.5	SO2	NOx	AQI
1	Ahmedabad (City)	Maninagar	106.06	40.24	12.13	15.51	104
2	Ahmedabad (East)	Vatva	97.27	35.52	20.95	47.24	97
3	Ankleshwar	Ankleshwar	76.98	46.02	28.48	54.25	77
4	Gandhinagar	Sachivalay	76.6	29.43	3.98	25.29	77
5	Vapi	Vapi	76.63	44.96	16.04	28.98	77

7.1.5 Real-Time Noise Monitoring Stations (RTNMS)

To strengthen the efforts to mitigate noise pollution across the state, the GPCB has established Real-Time Noise Monitoring Stations (RTNMS) in four major cities of Gujarat—Ahmedabad, Vadodara, Surat, and Rajkot. Each of these cities has been equipped with four RTNMS units, strategically installed to represent different noise-sensitive zones: (I) Residential Zone, (ii) Commercial Zone, (iii) Industrial Zone, (iv) Silent Zone.

Thus, a total of 16 Real-Time Noise Monitoring Stations have been installed across the state. This initiative enables GPCB to monitor trends. The data also supports the formulation of effective policies and awareness campaigns aimed at noise pollution control and public health protection.
